Objective

I am an enthusiastic and highly driven individual that always aims to find better ways to solve problems. I have over 5 years' worth of experience in software development and I have evolved over that time from proferring solutions not only by code but also at the architectural and design level as well. My experience has taken me across various industries which include Logistics, Education, Social networking, Health and Fintech.

Work experience

Senior Software Developer   2018 - present
Global Accelerex

- Developed web applications for loan providers to manage loan applications from their clients using the Scrum development methodology.
- Developed a monorepo architecture for one of our products used across different countries in West Africa, it helped us reduce the time it took for us to deploy features for specific countries or all the countries by combining all the initially separate applications into one using the Nx monorepo workspace.
- Developed reusable components and services like tables, forms, and directives that coincided with our design system.
- With the aid of Cypress, I wrote the end-to-end test scripts for testing the web applications at the company and also wrote unit tests for reusable component and services.
- Developed a document hub that allowed financial institutions to securely exchange tokenized documents. It was built for the governing body of online banking institutions in Nigeria.
- Developed the POSMON platform that helps clients/banks monitor transactions on terminals within our purview.
- Improved web accessibility of applications by following the WCAG principles.
- Lead the team to create the company's custom design system with Figma.
- Implement the PGP encryption for securing payment files and encrypting card transactions.
- Became the team lead of the Front End and Design team.

Front End Web Developer   2017 - 2018
Softquest Systems Limited

- Performed testing and debugging on components and full project
- Addressed an issue of website load speed, increased speed by 20%.
- Built codes for form validation, animations, transitions and made websites responsive.
- Converted an event registration application from Angular to an Ionic mobile application.
- Bind application views with endpoints (REST APIs).
- Became Lead Front End Developer and was in charge of deploying front end code to the server using Git.
- Designed a member location page using Google Maps to track member location.

Web Developer   2016 - 2017
NNPC-KRPC

- Developed a prototype for an online cataloguing system for the refinery's library using PHP.
- Participated in training staff on Systems, Applications and Products (SAP) which is an expert system for maintaining activities of staff in the organization.

Skills

Methodologies & Principles
Web Accessibility, LIFT principle, Responsive Web Design, Agile Development Methodology

Web Technologies
Angular 2-12, Git, Flutter, NodeJS, Progress Web Applications, Ionic, Bootstrap, Tailwind CSS, RxJS,Nx, React, JavaScript and Typescript

Testing
Cypress and Jest

Documentation
ReadMe , Swagger and Confluence

Project Management Tools
Trello and JIRA

Database
MySQL and MongoDB

Deployment
Amazon Web Services

Version Control Systems
GitHub and Bitbucket

Portfolio

Terminal Aggregate Management System: Built to manage terminals and display live transactions carried out with Global Accelerex terminal, it is currently being used in 3 banks.
